## **NEWSLETTER VOLUME – 2**

For internal circulation only

July-Sep 2007

### **EDITORIAL**

**Dear Readers,**

*I am very glad that all JDEL Staff members have read the first Newsletter & also some Staff members have sent us their views, Suggestions and their comments, this feedback has really helped us to bring this Second Issue.*

*I earnestly request all the staff members of the JDEL to share their knowledge through this Newsletter.*

*Last, but not least we would like to express our thanks to the Management and Staff Members who have contributed the articles for this Newsletter. Request you all to send your feedback regarding this Newsletter.*

*Warm Wishes*

*Ms. Sonamita Mukherjee.*

*Editor.*

Special Thanks to:

GM: *Mr. B.P. Sinha.*

Sr. Manager Contracts:

*Mr. Krishna Murthy. B. N.*

Works Manager. (Silvassa):

*Mr. Shaihk Khalid Sayed.*

DY. Manager: Works (Pondi)

*Mr. Karthik.M.R*

Exports Sales Manager:

*Mr. Binoy KC.*

HR- Executive:

*Mr. Abhinanda*

### **IN THIS ISSUE:**

- ✓ **COMPANY NEWS.**
- ✓ **TRAINING PROGRAM - BORN TO WIN.**
- ✓ **BUSINESS HIGHLIGHTS & DEVELOPMENTS AT W / SILVASSA.**
- ✓ **CELEBRATION OF INDEPENDENCE DAY – W / SILVASSA.**
- ✓ **KNOW YOUR COLLEAGUES.**
- ✓ **NEW JOINERS & BIRTHDAY LIST.**
- ✓ **CORPORATE HERO - SUCCESS STORY.**

**Next Issue in the Month of December.**

# **COMPANY NEWS**

## **HR HIGHLIGHTS**

- ❖ **Born to Win training program** was successfully completed at Bangalore Central Office (6 Weeks duration, from 26th June 2007) and works place in Pondicherry (5 weeks starting from 19<sup>th</sup> July 2007) and all the successful Participants of the program were awarded certification by Born to Win.

# SUCCESS STORY

## Azim Premji: The Rise of Wipro

When **Azim Premji**, 61, took over his family's company in 1966, it was known as Western Indian Vegetable Products, a poorly managed producer of cooking oil. As India's leading outsourcer, the company has locations around the globe and offers everything from research and development to customer-care call centers. Clients include Microsoft, Nokia and Sony.

It is a \$2.4 billion company that hired 2,693 new employees last quarter, bringing its total staff to 56,435.

Premji's current good fortune, however, came at great personal expense. Premji was just 21 years old and a student at Stanford when he got the call that his father had suddenly died.

He was called home to Mumbai and literally worked his way through his grief, managing to transform a cooking oil company into one of India's most successful high-tech outfits. (*Tara Weiss, Forbes*) Here, in his own words, "I inherited the company from my father after he died very unexpectedly from a heart attack in 1966. He was just 51-years-old, and I was 21.

"I was studying at Stanford University with two quarters left to go before receiving an undergraduate degree in electrical engineering. Then, I got the telephone call from my mother. I went home and I jumped into the company feet first, right from day one. There was no time to grieve my father.

"The first three years at home were difficult. I didn't have experience in business, and the

scope of my new responsibility awed me. Despite all that, I felt like I was being presented a challenge.

"The company was in a different context at that time — it produced edible oil and was commodity-oriented and a very volatile business. Conditions were difficult, but I thought it was important to be down in the trenches. "I spent a lot of time at our factory in a small village of 20,000 people that converted grain into the finished product. During the summers, the temperature was 110 to 120 degrees.

"But it was about to get even more uncomfortable. When I took over the family business, it had already been a publicly traded company for 20 years. During one of the first annual meetings I attended, one shareholder stood up and advised me and everyone in attendance that I should resign.

"As the years went on, I oversaw Wipro's diversification into other products, including soaps, wax and tin containers. But things really changed in 1977, when IBM left the country after India's then-socialist government required them to have a staff that was at least 60% Indian. "We seized that moment and began to find ways to capitalize on the computer's growing popularity and utility. By 1981, Wipro was producing its own computer. That profoundly changed my family's company. "It changed me, too. When I started out in business, I was an electrical engineering student. In 1994, I went back and finally finished my bachelor's degree."

# DO U KNOW ??

## *What is causing Global Warming?*

- ✓ Our fossil fuel use is the main source of these gases. Every time we drive a car, use electricity from coal-fired power plants, or heat our homes with oil or natural gas, we release carbon dioxide and other heat-trapping gases into the air.
- ✓ The second most important source of greenhouse gases is deforestation, mainly in the tropics, and other land-use changes.
- ✓ Since the atmospheric concentration of carbon dioxide has increased by 31 percent. Over the same period, atmospheric methane has risen by 151 percent, mostly from agricultural activities like growing rice and raising cattle.
- ✓ As the concentration of these gases grows, more heat is trapped by the atmosphere and less escapes back into space. These increase heat changes the climate, or dry spells and more severe storms.

## *Is there anything we can do about Global Warming?*

Yes! The most important action we can take to slow global warming is to reduce emissions of heat-trapping gases.

- Increasing energy efficiency standards.
- Encouraging the use of renewable energy sources (such as wind and solar power).
- Eliminating subsidies that encourage the use of coal and oil by making them artificially cheap.
- Protecting and restoring forests, which serve as important storehouses of carbon.

Individuals can reduce the need for fossil fuels and often save money by

- Driving less and driving more fuel-efficient and less-polluting cars.
- Using energy-efficient appliances.
- Using less electricity in general.

Businesses can increase efficiency and save substantial sums by doing the same things on a larger scale. And utilities can avoid building expensive new power plants by encouraging and helping customers to adopt efficiency measures.
